

Water Transfer

Onga Hi-Flo Moulded Centrifugal Pumps

The Onga Hi-Flo range delivers all the benefits: from high performance and efficiency to wide choice in performance and construction materials. And if that's not enough – take a look at the Onga OCS range of stainless steel centrifugal pumps on page 22.

Self-priming Range

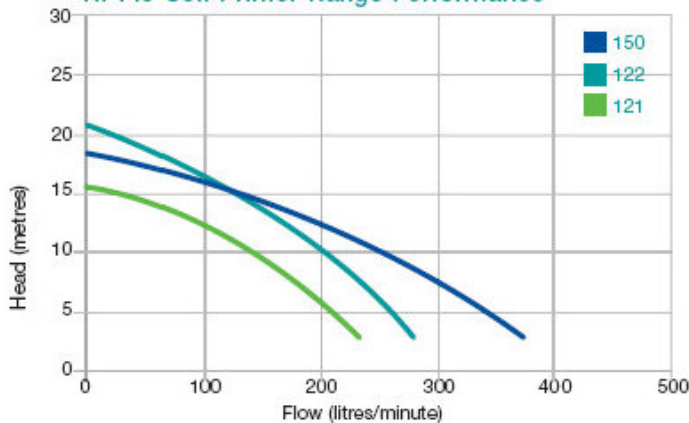

The self-priming versions of the HI-Flo range are suitable for pumping septic tank effluent. They are surface mounted, and so are far easier to service than submersible pumps. With an open impeller and a built in check valve, they have excellent self-priming characteristics, and can handle soft solids without clogging.
